

HOW DIRTY IS A CELL PHONE?

Like 22k Tweet 310 Share 1.7M

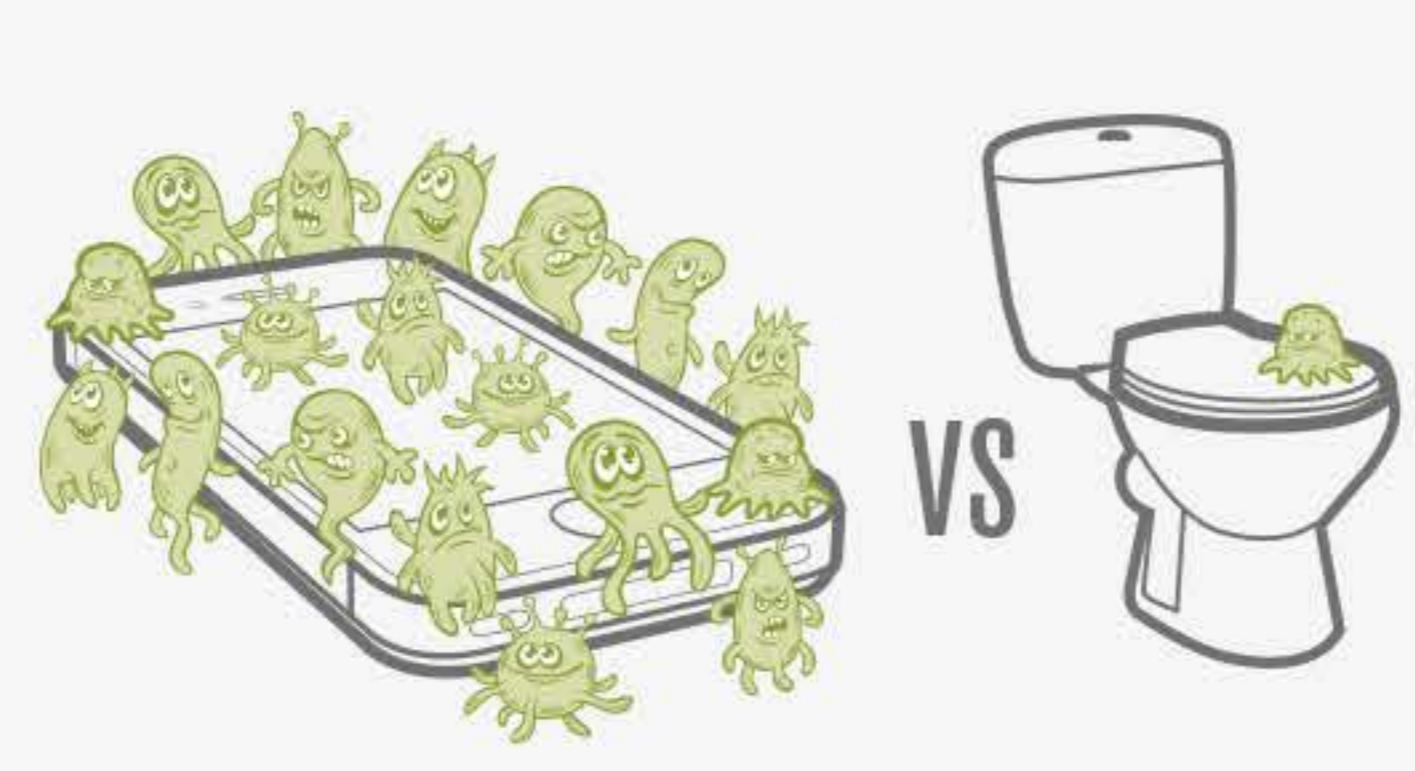

Our phones are filthy and it's not hard to see why. We are constantly in contact with dirty surfaces all the while using our phones. We wash our hands, but never think twice about cleaning our phones! Have you ever used your phone in the bathroom? (Don't worry, we all have.) Then it shouldn't surprise you that 1 in 6 cell phones have fecal matter on them!

DIRTIER THAN YOU THINK!

Have you even used a paper towel to open the door of a public restroom? Or tried to sneak out after someone else without touching the door? Do you use your foot to flush the toilet? It's because these are dirty handles! Did you know that your cell phone has 18x more harmful bacteria than that handle we all try to avoid? Have you ever sent a text or replied to an email between bites? Well, you might as well have licked the toilet handle after flushing or the door on the way out!

A CELL PHONE HAS 18 TIMES MORE BACTERIA THAN A PUBLIC RESTROOM

HOW?

How Does MY PHONE GET DIRTY?

WARMTH BREEDS BACTERIA PHONES ARE WARM AND WE KEEP THEM IN WARM PLACES

Breeding Ground For Bacteria

Our phones don't just collect the bacteria from all of the grossness we touch, they BREED bacteria! Our phones are always warm from the battery and we store them in tight, dark spaces like pockets and purses. Your phone is where germs go to party.

SO WHAT?

THE WAY WE USE OUR PHONES MAKES US... SICK

no more ACNE!

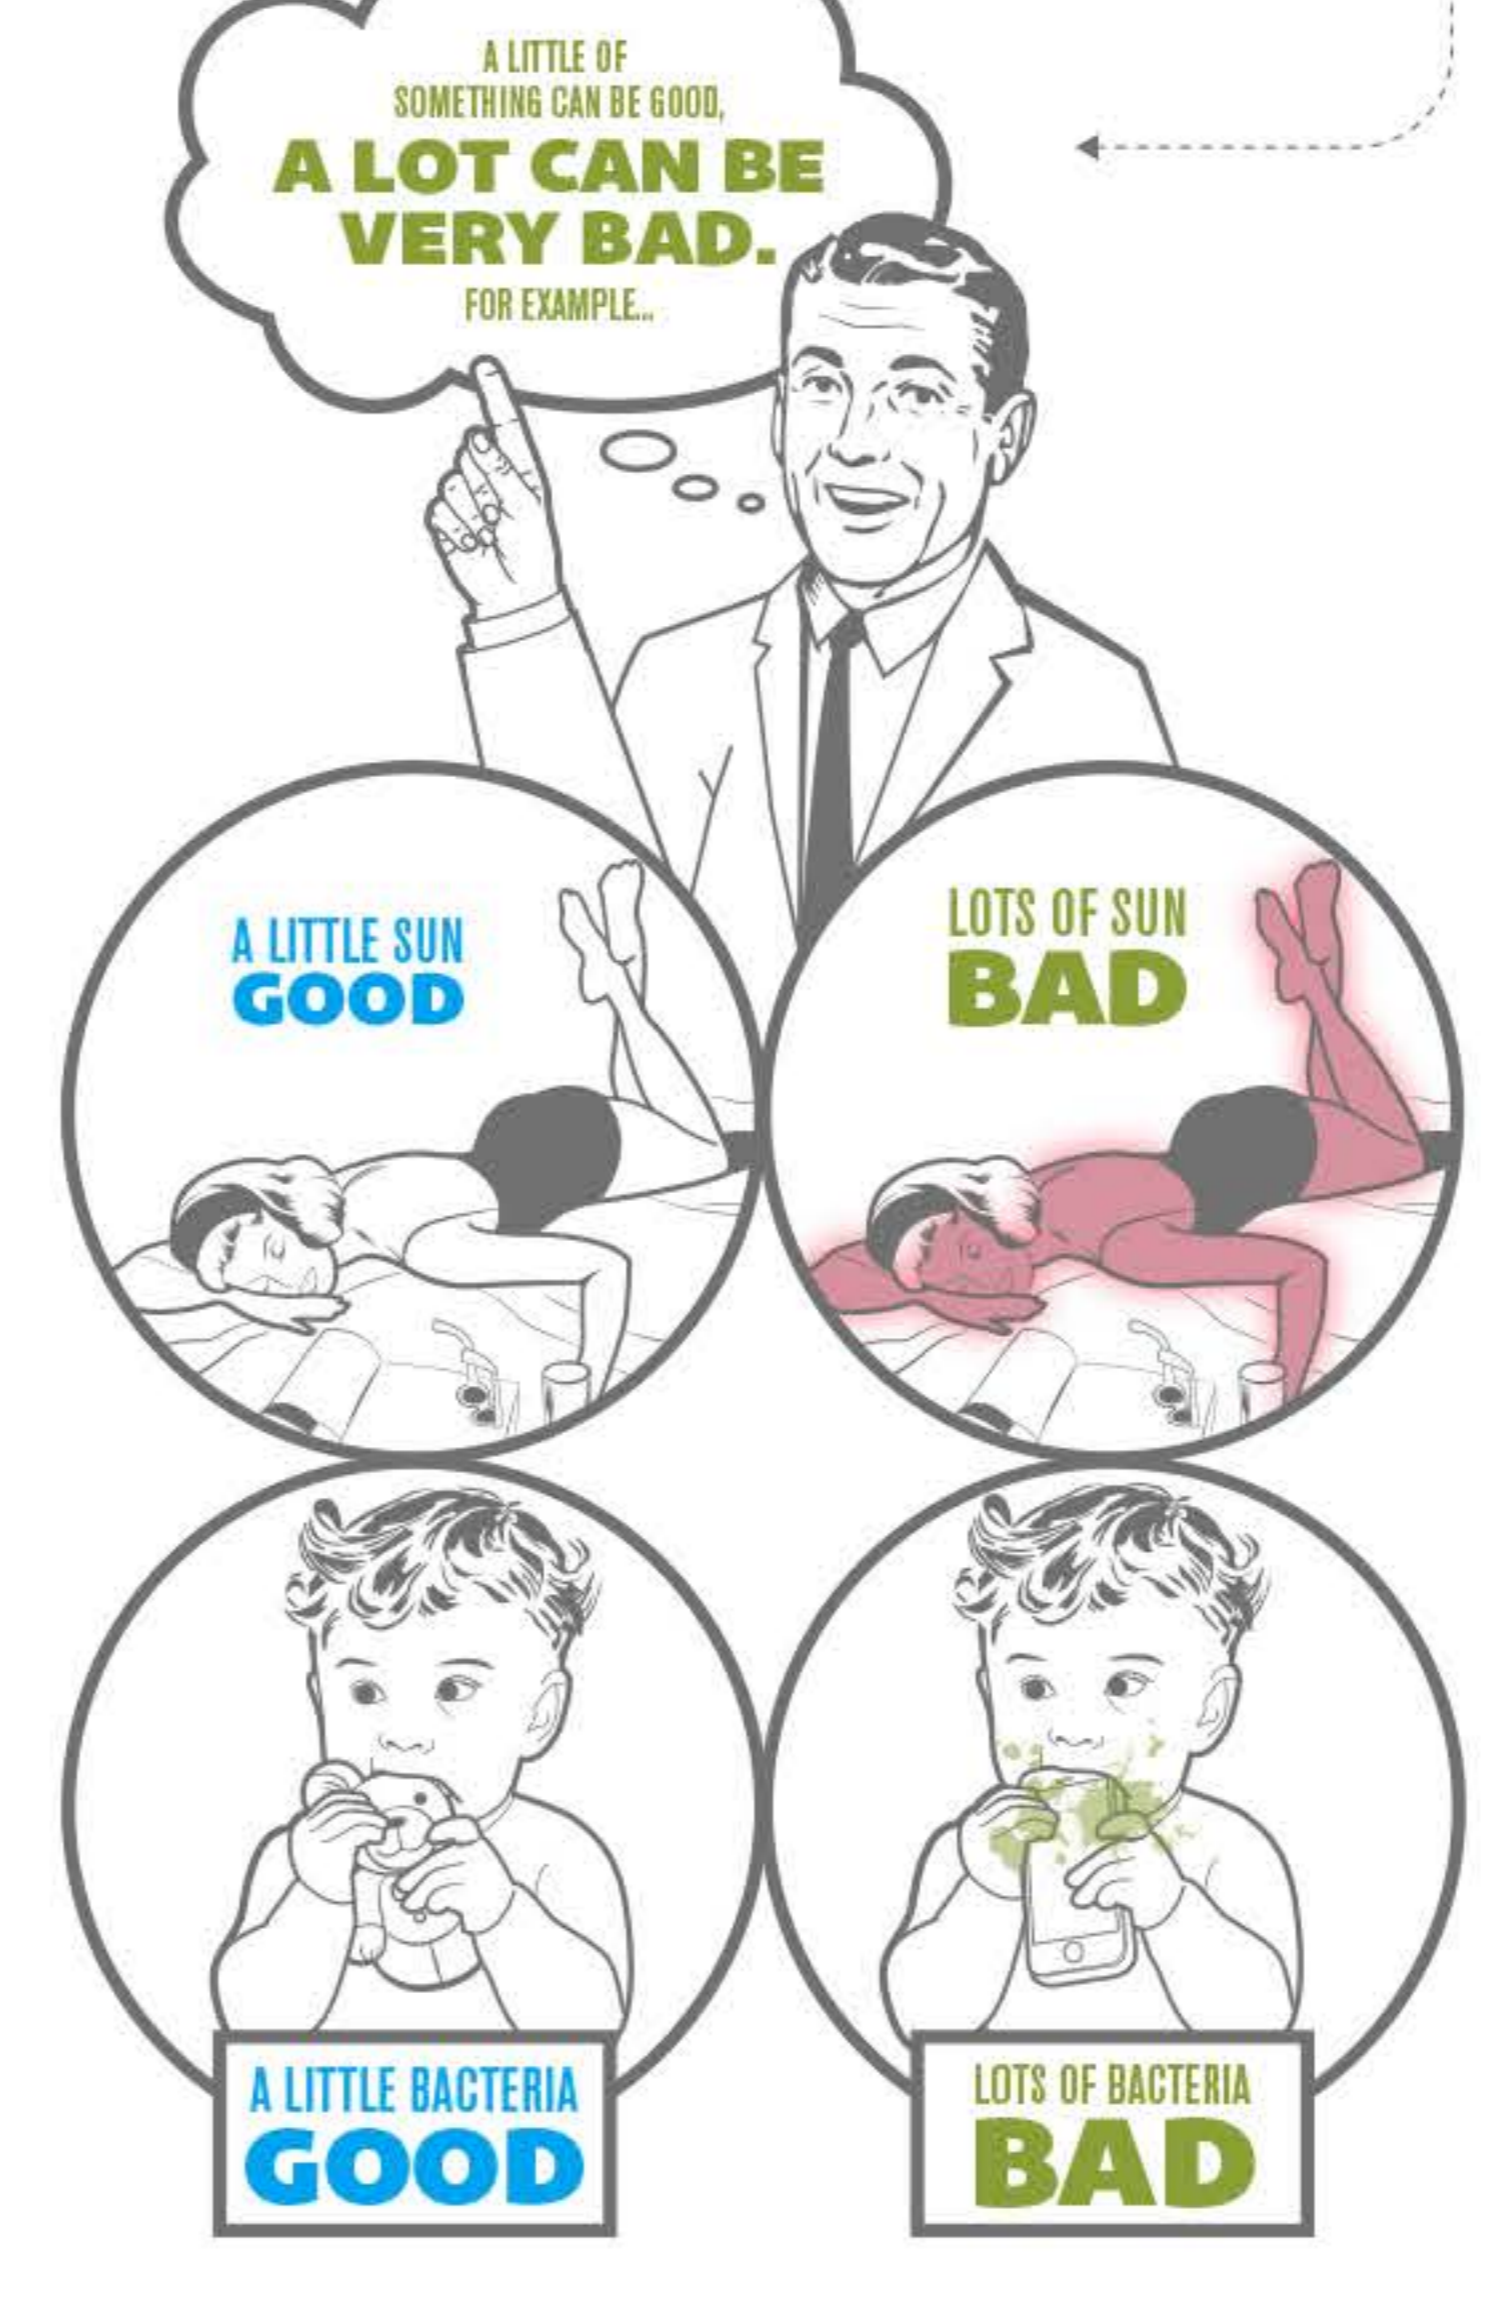

Not only is the bacteria on our phone unhealthy for our immune system, it can cause some serious facial effects. Some types of acne come directly from talking on the phone! Pressing your cheek and chin against your phone can exacerbate acne by allowing bacteria to get into the pores and cause chaos.

THERES MORE?

BE HEALTHIER

It's true, some bacteria is good to keep your immune system active, but in the same way that a little sun is good for the skin, too much of it can cause serious problems! We are in contact with small amounts of bacteria all day, but our phones harbor bacteria we should not be coming in contact with at all and at higher frequencies than ever! People are just as likely to get sick from their phones as from handles of the bathroom!
