Personalized Family Member Signpost

(Signs are labeled on the back and need to be attached to the pole in alphabetical order, with “A” at the top)

1) Select the white screws that match sign “A”. Insert the screws through the front holes of sign “A” and through the top holes on the pole.

2) Place washers on the back of the screws before adding the nuts. Hand tighten the nuts.

3) Repeat this process for the other signs attaching each in alphabetical order with its corresponding colored screws, working your way down the pole.
4) To ensure the sign is secure, use a wrench and screwdriver to tighten the screws and nuts.

5) To install the sign in the ground, dig a narrow hole that is about 12 inches deep.

6) The bottom of the sign is coated in a black protective paint. Insert the sign into the hole, adjusting the hole depth so that about an inch of the black paint is above ground level.

7) Fill the hole with dirt, packing it down to secure the sign.

Additional Care Instructions:
The finish can be maintained by applying car wax once a year, or as needed.
